

City of Rapid City (300 6th Street, Rapid City, SD, 57701), Canyon Lake Dam, \$5,000,000- Replacement of this dam is necessary to protect the welfare of those individuals living along Rapid Creek, and to ensure that Canyon Lake Park, the primary park facility in Rapid City, is a viable property for recreation. Inspections have revealed several areas of significant seepage through the foundation under the dam, as well as leakage through joints in the structure. These conditions, if left unattended, could result in a significant decrease in the service life of the facility. Canyon Lake Dam was constructed in the 1920s as a flood control structure. The high population located below the spillway classifies Canyon Lake as a high-hazard dam. The focus of the project is on dam structure stabilization and rehabilitation, but some canal stone wall repairs will also take place.

City of Summerset (P.O. Box 783, Black Hawk, SD, 57718), Summerset Predisaster Mitigation Project, \$414,000- The city of Summerset is requesting funds to develop and construct a flood mitigation project to mitigate hazards to human life and infrastructure in view of a standardized 100-year storm event. The project will focus on improving the drainage infrastructure in the town. Federal funds would be leveraged with local funding and utilized to protect critical infrastructure and residential property from flood damage. Funding the project would reduce the overall risks to the population and structures, while also reducing reliance on funding from future disaster declarations. According to a recent hydrology analysis, a severe flood would likely cause severe damage to the area and might compromise the safety of a significant portion of the city's population.
